

## CyberPRO Also Includes Avast Business Endpoint Protection

*All-in-one protection for devices, data, and people.*

Built on the largest, most globally dispersed threat detection network in the world, Avast Business Endpoint Protection Solutions deliver superior, enterprise-grade protection for PCs that keeps small and medium businesses safe from today's threats—and tomorrow's. (Currently not available for Macs at this time.)

### Four-shield defense system

These components work together to actively analyze suspicious information coming and going from devices and block malicious files, dangerous websites, unusual behavior, unauthorized connections and other threats.

#### Web Shield

#### File Shield

#### Email Shield

#### Behavior Shield

#### Firewall

Monitors all network traffic between your PC and the outside world to prevent unauthorized communication.

### Backup and Disaster Recovery

Backup ensures all data is protected and available in the event of a disaster. It provides a secure and automated backup for devices, SQL servers, Microsoft Exchange servers, and file servers.

- **Protect mission-critical data**—Back up workstation files and folders or perform bare metal backups on servers to ensure all mission-critical data is secured

- **Centrally monitor and manage**—Set backup and recovery policies, receive alerts on backup failures, and monitor all endpoints and sites under management.

- **Recover quickly**—If disaster strikes, simply recover data from either the cloud or onsite backup and restore to the new designated location.
